Executive Summary

In 2026, Doctors for Madagascar (DfM) made significant strides in enhancing healthcare access and quality across the regions we serve. Our patient support program successfully managed 1,304 cases, with DfM covering a substantial 70.9% of the total costs amounting to 75,078,639. This support helped avoid 295 catastrophic health expenditures for our patients across 15 healthcare sites. Our commitment to improving health outcomes is reflected in our various programs, including the ambulance service, tuberculosis (TB) management, community sensitization, and workforce training, all of which contributed to our overarching goal of providing equitable healthcare services to vulnerable populations.

Financial Access and Patient Support

The Maternal and Child Health Program (MCHP) demonstrated a robust performance in 2026, with DfM providing critical support to 1,304 cases. Our financial assistance covered 70.9% of the total costs, amounting to 75,078,639, significantly alleviating the financial burden on families. The program's impact was further underscored by the prevention of 295 catastrophic health expenditures, ensuring that families could access necessary healthcare without facing financial ruin. With services available at 15 sites, the MCHP continues to be a cornerstone of our health initiatives, promoting maternal and child health in underserved communities.

Ambulance and Emergency Referrals

In 2026, our ambulance service facilitated 142 trips, covering a total distance of 8,829 kilometers. The median response time for emergency calls was recorded at 2.52 hours, demonstrating our commitment to timely medical assistance. The effectiveness of our ambulance service is highlighted by a remarkable cure rate of 85.9%, showcasing the positive impact of rapid transport on patient outcomes. This service remains vital in ensuring that individuals in urgent need of medical care receive prompt attention, thereby improving overall health outcomes in the communities we serve.

Tuberculosis Patient Journey

The tuberculosis (TB) program in 2026 recorded 2,267 patient records, with 603 individuals testing positive for the disease. A total of 626 treatments were administered across five dedicated centers, reflecting our ongoing commitment to combatting TB in the regions we serve. This comprehensive approach not only focuses on treatment but also emphasizes early detection and management of TB, which is crucial for reducing transmission rates. Our efforts in this area are vital for improving public health and ensuring that affected individuals receive the care they need.

Community Health Workers

In 2026, DfM engaged in 71 community sensitization activities, reaching a total of 2,891 participants. These initiatives aimed to raise awareness about health issues and promote healthy practices within the communities we serve. As a result of these activities, 63 referrals were made for further medical assistance, demonstrating the effectiveness of our outreach efforts. By fostering community engagement and education, we empower individuals to take charge of their health and seek timely medical care, ultimately contributing to better health outcomes.

Community Mobilization

The sensitization program conducted by DfM in 2026 included 71 activities that successfully engaged 2,891 participants. These sessions were designed to educate communities about various health issues, encouraging proactive health-seeking behaviors. The program resulted in 63 referrals for medical assistance, highlighting the effectiveness of our outreach efforts in connecting individuals with necessary healthcare services. By prioritizing community education and awareness, we aim to enhance health literacy and promote healthier lifestyles among the populations we serve.

Data Quality and Audit Trail

In 2026, DfM achieved an impressive data quality rate of 97.8%, with 6,856 records classified as high quality, 137 as medium quality, and only 15 as low quality. This high standard of data integrity is essential for effective program evaluation and decision-making. By ensuring that our data collection and management processes are robust, we can better track health outcomes, allocate resources efficiently, and continuously improve our services. Maintaining high data quality is a priority for DfM, as it underpins our commitment to transparency and accountability in our health programs.

Data Confidence Distribution

Technical Appendix

Report generation: 2026-06-28 09:25

Reporting period filter: year = 2026

Data source: Local CSV files in data/reporting/

LLM used for narratives: OpenAI gpt-4o-mini

CSV-only principle: No external data, images, or manual inputs.

Privacy: No row-level identifiers exposed (patient_key, worker_id, record_id filtered).

Aggregation: All KPIs are simple counts, sums, or medians from filtered rows.

Confidence: Rows tagged with data_confidence_marker (high/medium/low) from ETL pipeline.
